

Mid-price and trade-sign dependence: event time, operational time, and explicit subordination

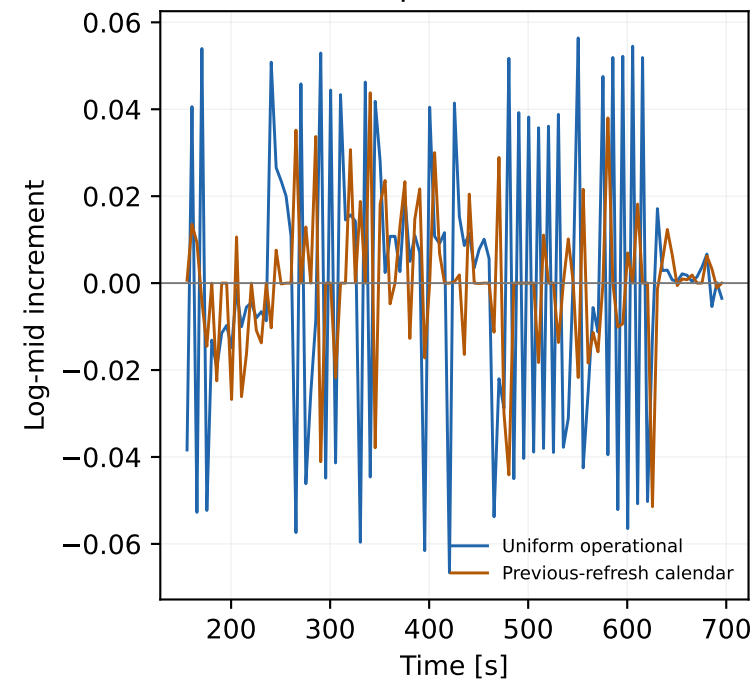

(a) Uniform-operational log-mid path

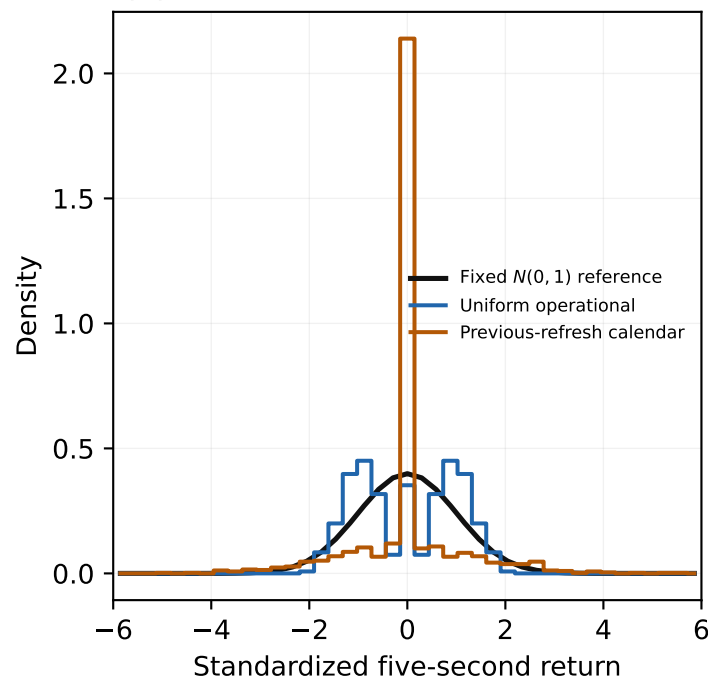

(b) Previous-refresh calendar path

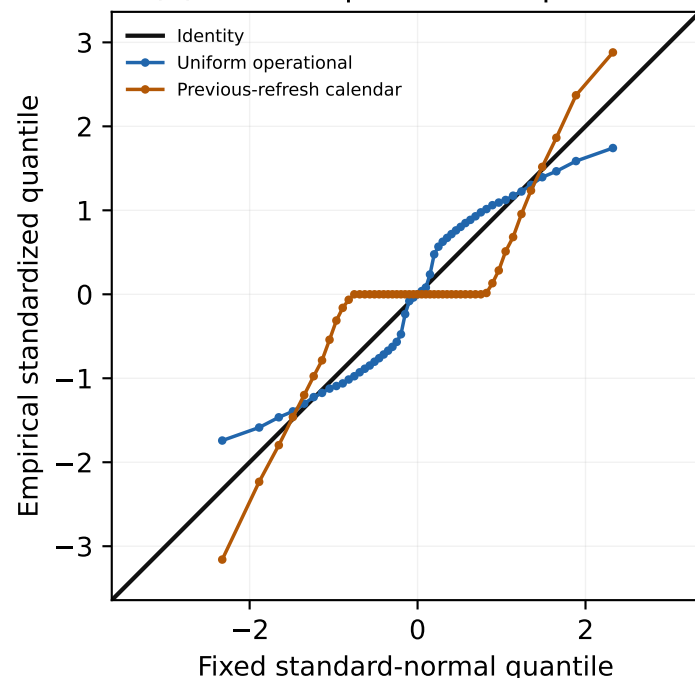

(c) Five-second pair-centre increments

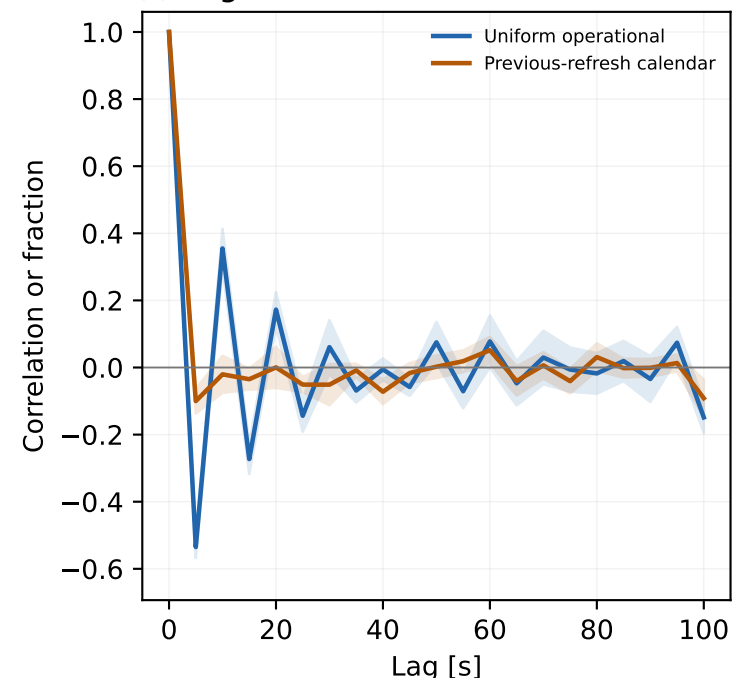

(d) Standardized return distribution

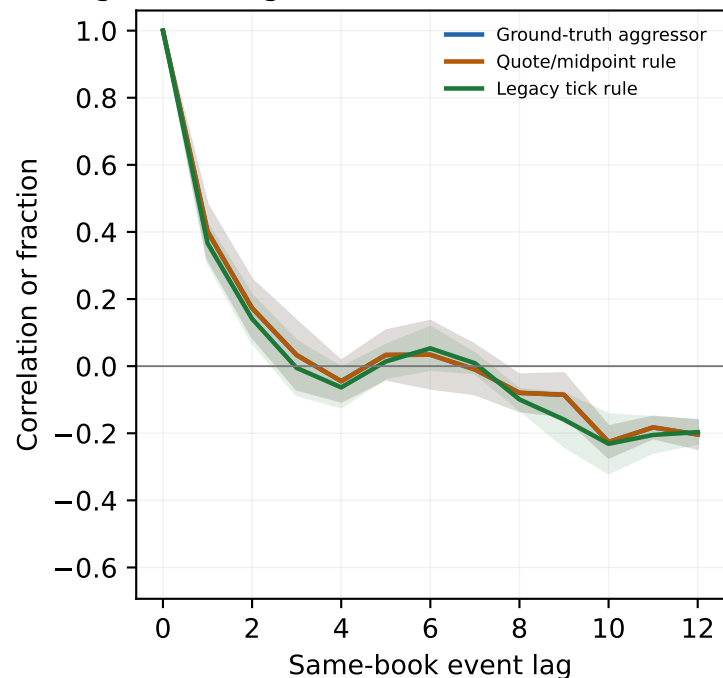

(e) Normal quantile comparison

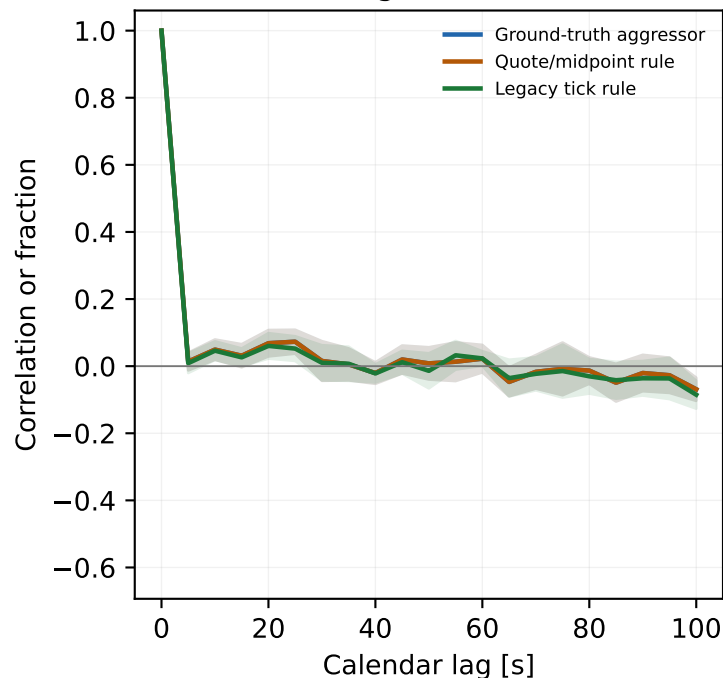

(f) Log-mid increment autocorrelation

(g) Trade-sign autocorrelation in event time

(h) Subordinated signed-flow autocorrelation

(i) Sign-convention agreement
